Benefits for consumers

- + Cleaner water
- + Healthier fish
- + Vibrant colours
- = Delighted consumers

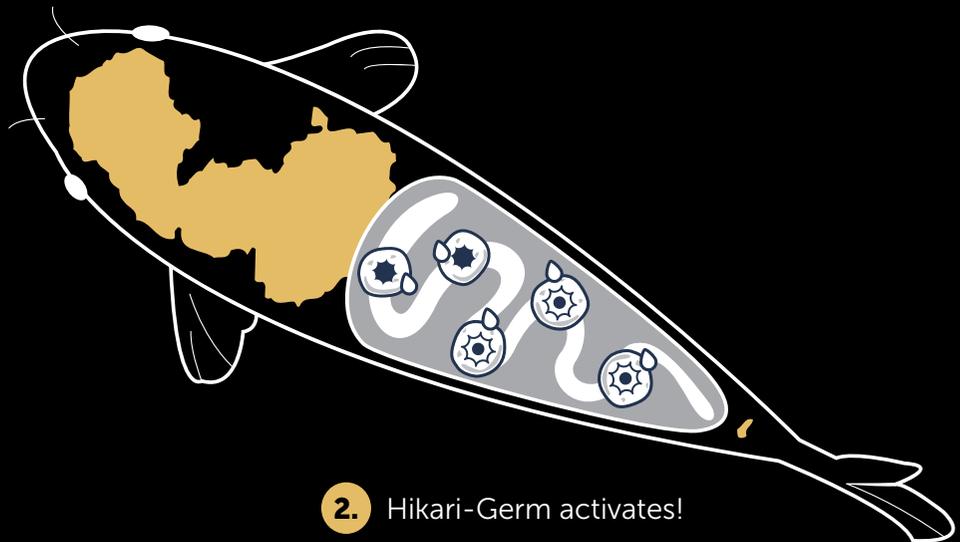

How the Hikari-Germ works

Kyorin Ltd. Calls upon over eleven decades of ornamental fish-breeding experience to bring you the unique Hikari-Germ probiotic diet range. For consumers who want to give their Koi the best start in life, the greatest protection from common diseases and the peace of mind that comes with quality, whether preparing for a show or enjoying their Koi at home, recommend

Hikari Germ will improve the digestive capacity of the Koi by creating millions of beneficial digestive enzymes, increasing and supporting gut absorption of vitamins and minerals. At the next stage of the Hikari-Germ process, the probiotic reduces the multiplication of bad gut bacteria, reducing the chances of significant disease or illness and protecting your Koi investment

1. Dormant Hikari-Germ awaiting consumption

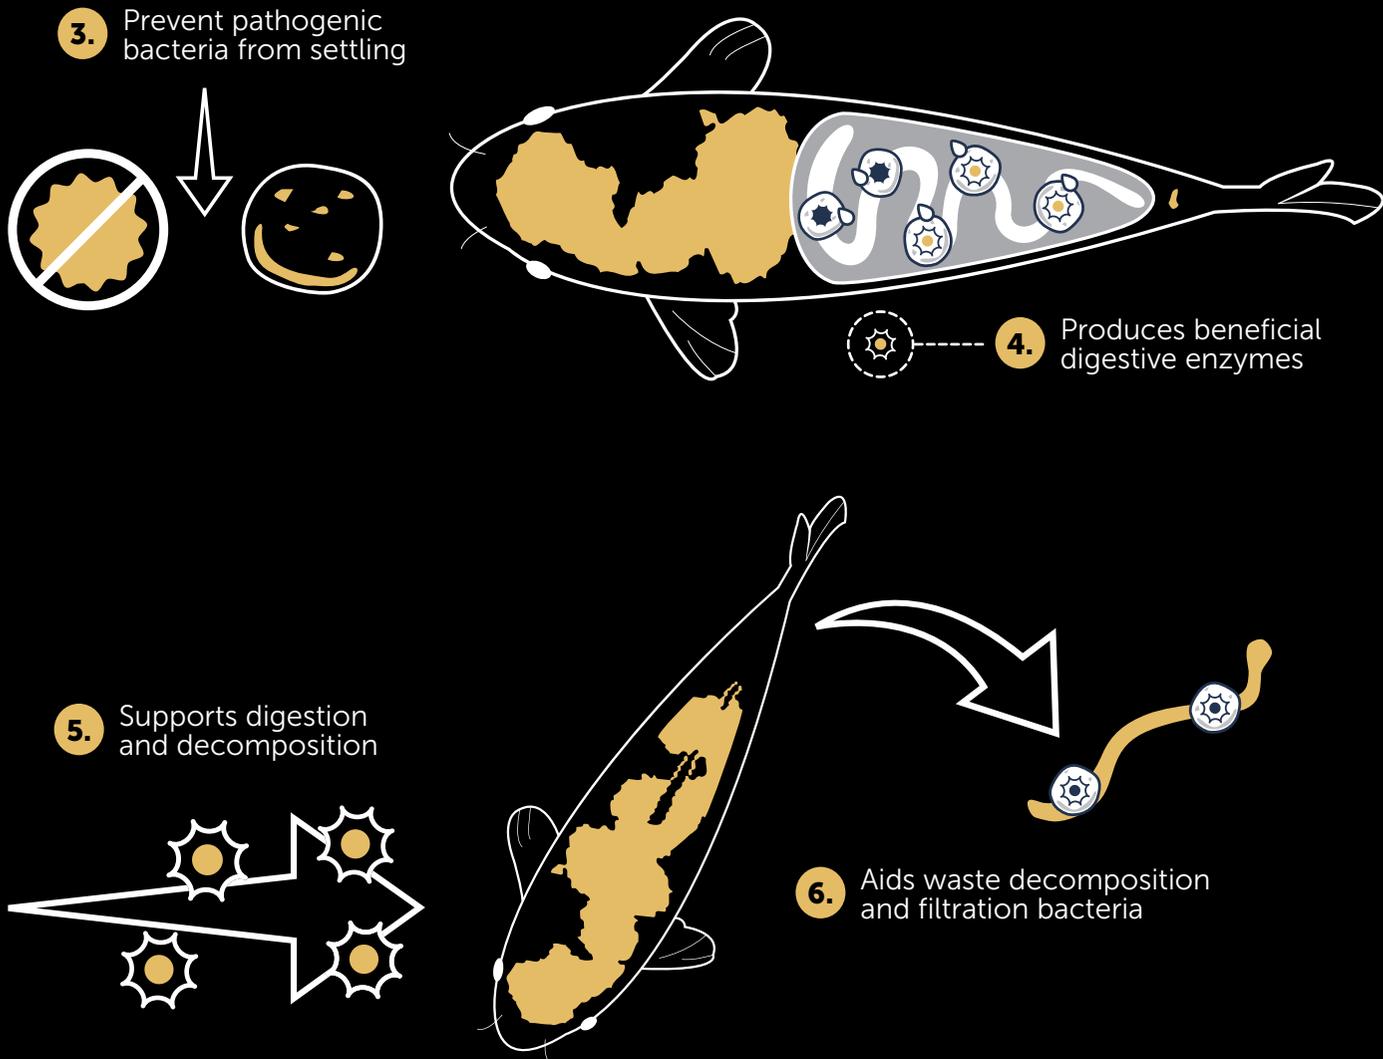

2. Hikari-Germ activates!

the Saki-Hikari probiotic range. Each pellet contains a dormant Hikari-Germ probiotic, waiting to be activated. A living strain of Bacillus bacteria probiotic in a 'suspended animation' state embedded in the food and once fed, it becomes activated in the intestinal tract of the Koi – the stage 1 of the process. The probiotic then proliferates in the Koi gut during stage 2 and in doing so, offers many positive benefits. For example, the

and health. During the final stages of the activity, discharged wastes are highly decomposed by the continued but temporary activity of the Hikari-Germ. This helps improve the overall water quality of your pond whilst reducing the loads on your bio-filters with the added effect of reducing overall maintenance required. By any consumer standard, the benefits of the Hikari-Germ are clear to see and as long as feeding with Saki Hikari probiotic

foods continues without lapsing or mixing with other brands, the benefits endure as well. Saki-Hikari is a true diet of champions, having been fed to seven consecutive Grand Champion winners at the All Japan Nishikigoj Shows in the past two decades. Saki-Hikari was the worlds first probiotic Koi diet, with a rich heritage of research and development over many years. See below for a visual guide on how the Hikari-Germ benefits your Koi and the stages of the process. We think you will agree – with Saki-Hikari, the Difference is Clear!
